## Abstracts

According to this study, the global Smart Charging Emulation Software market size will reach US\$ 498 million by 2031.

Smart Charging Emulation Software refers to specialized digital platforms designed to simulate, test, and validate electric vehicle (EV) charging systems, enabling the development and optimization of intelligent charging behaviors without requiring physical EVs or chargers. These tools replicate the communication protocols, power flow dynamics, and behavior of EVs, EV supply equipment (EVSE), grid interfaces, and charging networks under various scenarios, including load balancing, time-of-use pricing, demand response, vehicle-to-grid (V2G) interaction, and charging station coordination. Widely used by EV manufacturers, charger developers, utilities, and researchers, smart charging emulation software accelerates interoperability testing, compliance with standards like ISO 15118 and OCPP, and the deployment of energy-efficient, scalable charging infrastructure.
