The Smart City Full-Domain CIM Platform is an integrated city information model platform for city-wide spatial governance and smart city operation. It typically uses the city information model as its core foundation, integrating basic geographic information, BIM models, 3D white/fine models, oblique photogrammetry, laser point clouds, underground pipelines, urban components, IoT sensing data, government business data, and urban operation data to form a unified 3D digital space covering above-ground and underground, indoor and outdoor, macro-city to micro-building, planning and construction to operation and management. The Smart City Full-Domain CIM Platform emphasizes full spatial coverage, full-cycle management and control, full business collaboration, and real-time intelligent applications: Spatially, it covers not only individual parks, districts, or buildings, but the entire city and key areas; in terms of data scope, it not only aggregates static 3D models but also integrates dynamic data from transportation, municipal administration, emergency response, water resources, energy, urban management, environmental protection, and security; functionally, it goes beyond 3D visualization, providing data governance, lightweight model design, spatial analysis, indicator calculation, simulation, event early warning, emergency drills, business collaboration, and open interface capabilities. This provides a unified data foundation and decision support for land-use planning, engineering construction approval, urban renewal, underground pipeline management, urban lifeline safety, smart transportation, smart water resources, smart emergency response, park operation, low-carbon management, and major project supervision. The gross profit margin is approximately 45%?65%.
