## Abstracts

The global Smart Dispensing and Packaging System market size is predicted to grow from US$ 1000 million in 2025 to US$ 1610 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

The Smart Dispensing and Packaging System is an intelligent pharmacy device integrating mechanical, electronic, and computer technologies. It seamlessly receives and processes electronic prescriptions through the Hospital Information System (HIS), automatically identifying, grasping, counting, and dispensing medications, and sealing each single-dose medication in a medicine bag printed with information such as the patient's name, bed number, medication name, dosage, usage instructions, and administration time.

Its working principle is a highly automated closed-loop process. After the pharmacist confirms the prescription on the system, a smart medicine box with an individual code in the storage cabinet releases a single medication according to the instruction. The medication falls into the medicine bag through a collection funnel, and then sequentially completes information printing, heat sealing, and cutting and packaging, finally conveying the sealed medicine bag to the dispensing port.

In 2025, global Smart Dispensing and Packaging System sales reached approximately 1,352 K Units, with an average global market price of around 756 US$/Unit. Production capacity reached 2,500 K Units, with a gross profit margin of approximately 35%.

United States market for Smart Dispensing and Packaging System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
