The global Smart Door Magnetic Sensors market size is predicted to grow from US\$ 1597 million in 2025 to US\$ 2396 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

A smart door magnetic sensor is an intelligent sensing device that uses the principle of magnetic induction to detect the status of doors, windows, cabinet doors, or other opening and closing components in real time. It typically consists of a magnet and a sensor body. When a door or window is opened or closed, the magnetic field changes, and the sensor can identify the open/closed state and transmit the information to a smart home platform, security system, or IoT management platform to achieve status monitoring, alarm linkage, and remote management functions.

The upstream of the industry chain mainly includes suppliers of components and materials such as reed switches, Hall sensors, magnetoresistive sensors, MCU chips, wireless communication chips (Wi-Fi, Bluetooth, Zigbee, Z-Wave, Thread, NB-IoT, etc.), batteries, power management chips, PCBs, resistors, capacitors, and plastic housings. The midstream consists of smart door magnetic sensor manufacturers, who produce smart door magnetic products through hardware design, wireless communication integration, low-power optimization, firmware development, and complete assembly, and connect them to smart home platforms, security platforms, or IoT management systems. The downstream is mainly used in smart homes, commercial buildings, and industrial facilities to achieve functions such as door and window opening/closing status monitoring, intrusion alarms, remote control, and smart scene linkage.

In 2025, global sales of smart door magnetic sensors reached 230 million units, with a production capacity of approximately 320 million units, an average selling price of \$7.1

per unit, and an average gross profit margin of 25%-35%.

The global development of smart cities, digital buildings, and home security has created a favorable policy environment for the industry. European and American markets continue to promote the construction of smart buildings and energy-saving management systems, while China is actively promoting the development of smart communities, smart homes, and the Internet of Things (IoT) industry. Meanwhile, the widespread adoption of the Matter standard is reshaping the industry ecosystem, promoting interoperability between devices, improving user experience, and reducing ecosystem barriers. Security standards, wireless communication certifications, and data security regulations have also become important factors for companies in product development and market access.
