Smart Electrochromic Window Film is a window film material with intelligent adjustment of light transmission properties. It uses electrochromic technology, which can adjust the light transmittance and privacy of the window by changing the light transmission properties of the material. Smart Electrochromic Window Film is usually composed of multi-layer composite materials, including conductive layer, electrochromic layer and reflective layer. When a voltage is applied, specific materials in the electrochromic layer change color or adjust transparency, thereby controlling how much light can penetrate. This technology allows smart electrochromic window film to automatically adjust light as needed to adapt to different environments and usage needs.
