## Abstracts

According to this study, the global Smart Elevator Operation and Maintenance Platform market size will reach US\$ 1529 million by 2031.

The smart elevator operation and maintenance platform is an elevator remote management and operation and maintenance system based on the Internet of Things (IoT), cloud computing, big data and artificial intelligence technology. The platform installs sensors, communication modules and control terminals on the elevator to realize the real-time collection and upload of data such as elevator operation status, fault information, and frequency of use, thereby providing fault warning, remote diagnosis, precise maintenance and data analysis services to maintenance companies, elevator manufacturers and property managers. Compared with the traditional manual inspection mode, the smart operation and maintenance platform has greatly improved the response efficiency and elevator safety.

Its development trend is mainly reflected in three aspects: First, intelligent upgrade, AI algorithms and machine learning will be more deeply used in elevator fault prediction, life assessment and operation optimization; second, data closed-loop management, the platform will realize the full process automation from data collection, analysis, decision-making to maintenance execution; third, ecological integration development, the smart elevator operation and maintenance platform will further link with smart cities, smart properties, digital twins and other systems, and become an important part of urban operation management.

According to data released by the National Bureau of Statistics, China's elevator production in 2022 was 1.455 million units, which was down 5.8% compared to last

year. After years of development, China has become the world's largest elevator producer and consumer. More than 70% of the world's elevator manufacturing business were in Chinese mainland, and 60%-65% of the world's elevators sold in the Chinese market. According to data from the China Elevator Association, by the end of 2022, the number of elevators registered in operation in China has reached 9.65 million, and more than 15,000 elevators have been installed after acceptance.
