Elevators are frequently used and have a large flow of people. To prevent the spread of bacteria and viruses in elevators, Yizhu UV disinfection uses the elevator's idle time for disinfection. When the elevator is in energy-saving mode (that is, no one in the elevator), the UV light automatically starts to disinfect; when someone calls the elevator and the elevator door opens, the UV light automatically turns off and stops disinfection. When there is someone in the elevator, the UV light is absolutely off.
