The global Smart Fetal Heart Monitor market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

Fetal heart rate (FHR) varies with gestational age. It starts at a slow pace, then increases every day until it stabilizes around 12th week. The normal heart rate during this gestation is 120 to 160bpm. It is necessary to track the fetal heartbeat to know if the baby is healthy. If the heart rate is too fast, slow or irregular, it could be some heart problems that need attention. Smart fetal heart monitor provides a portable and smart solution for this.

A fetal heart rate monitor is a fetal heart rate checking device. Smart Fetal Heart Tracker can help you hear your baby's heartbeat, detect and record the fetal heart rate (FHR), displays in digit/waveform via device and APP.
