Smart height and weight column is an intelligent health management product, mainly used to measure physiological indicators such as human height and weight to help people manage their health and control their body shape. Smart height and weight column usually uses ultrasonic or infrared ranging sensors to measure height. These sensors emit signals above the human body, and then estimate the height of the human body by calculating the time difference or phase difference of the reflected signal. Through the built-in pressure sensor, the smart height and weight column can sense the pressure of the human body on the scale surface, convert it into an electrical signal for processing, and finally display the weight value.
