The global Smart IC Card Water Meters market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Smart IC card water meter is a new-type of water meter that uses modern microelectronics, sensing technology and smart IC card technology to measure water consumption, transmit data about water use and settle accounts. It is a huge progress, compared to traditional water meters whose functions only include collecting water flow and showing water use with mechanical pointer. In addition to water use records and electronic display, smart water meters can also control water use, automatically calculate water bills in differential water pricing system, and store water use data. Since the data transmission and settlement are conducted through IC cards, users may directly pay their bills in the office instead of meter readers going to users' homes to read water meters and collect fees.

United States market for Smart IC Card Water Meters is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
