A Smart Keyless Entry System for Cars is an advanced automotive access technology designed to replace or supplement traditional physical key systems, enabling users to unlock, lock, and in many cases start their vehicles without inserting or manually operating a key. It typically consists of two core components: a compact, portable electronic key fob (or a smartphone app paired via Bluetooth, NFC, or UWB—Ultra-Wideband) and on-board vehicle sensors (e.g., radio frequency [RF], UWB, or proximity detectors) integrated into the car's body, door handles, and ignition/start system. The system operates through wireless communication: when the user carrying the fob (or paired smartphone) approaches the vehicle (usually within 1–2 meters), the on-board sensors detect the fob’s unique encrypted signal, automatically unlocking the doors (often via a touch-sensitive door handle or hands-free trigger). When the user moves away from the vehicle beyond a preset distance, the system automatically locks the doors to enhance security.
