Smart Link Software enables the creation of shareable, trackable landing pages designed to drive users to complete a specific action using their preferred app or service. This type of software is primarily used in music marketing but can also be leveraged by podcasters and other distributors of audio content. Consumers today use a variety of different platforms to stream and purchase digital content. When a creator releases new content, such as a song or podcast episode, they face a dilemma in choosing which link to share with their audience. Linking to just one service can alienate potential customers who prefer a different service. Smart link software solves this problem by allowing consumers to access content through the app of their choice.
