A Smart Manhole Monitoring System is an advanced infrastructure solution designed to enhance the management and maintenance of manholes in urban environments. It integrates various sensors and communication technologies to monitor the condition of manholes in real time. This system typically includes sensors that track parameters such as water levels, temperature, and gas concentrations within the manhole, as well as structural integrity and potential blockages. Data collected by these sensors is transmitted to a central management platform, allowing for real-time analysis and alerts. This enables municipalities and utility companies to proactively address issues such as flooding, blockages, or structural damage, improving maintenance efficiency and reducing the risk of infrastructure failures and associated hazards.
