The mounting adoption of advanced technology to ease the overall processes performed in the agriculture sector, which includes adopting the automated pest monitoring system by the farmers, decreases the manual intervention in fields. The manual pest controlling process in farming is time-consuming, it involves more labor at an additional cost for farmers, and it raises safety issues for workers. The adoption of smart pest monitoring management systems reduces crop damage by pests and decreases the farmer's field visits for pest monitoring from time to time. The application of smart pest monitoring management systems boosts the accuracy of pest monitoring at a lower cost.
