The global Smart Potentiometric Titrator market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Smart Potentiometric Titrator is using automatic or semi-automatic potentiometric titration technology for the measurement and analysis of acid-base titration in chemical analysis. Smart potentiometric titrators usually have high-precision liquid control systems, sensitive potential detection systems and multi-functional data. With processing and analysis functions, the user only needs to set the titration end point and the required titration method, and the instrument will automatically control the addition of titration liquid and record the potential value, and determine the titration end point based on the preset end point criterion. It can greatly improve the accuracy and efficiency of acid-base titration, reduce human errors in operation, and can store and analyze multiple sets of data, which is convenient for experimental records and subsequent data analysis.
