The global Smart Sortation System market size is predicted to grow from US\$ 9809 million in 2025 to US\$ 20500 million in 2031; it is expected to grow at a CAGR of 13.1% from 2025 to 2031.

Smart Sortation System is a modern device integrating light, machine, electricity, and information technology, with a wide range of technology extensions. The sorting system is generally ring-shaped, and is driven by a linear motor drive assembly placed in the track without mechanical transmission friction. Drive to the preset sorting opening, and sort the parcels to the target intersection by rotating the sorting trolley belt.

Classical Smart Sortation solutions include flap type, bag drop type, slider type, narrow belt type, swing arm type, etc. The emerging intelligent sorting solutions mainly include cross belt type and AGV type. The automated sorting system is based on its layout and parameters. And other features are applied in different scenarios. Among them, the circular cross-belt sorter has advantages in technical parameters and cost-effectiveness. At present, as the main solution for small-piece express sorting, it is widely used in the express industry. A set of cross-belt sorting equipment includes feed parts. Platforms, cross-belt trolleys, tracks, driving devices, information identification devices, information management systems, control systems and grids, excluding auxiliary conveyor belts and other equipment. The swing arm type is currently the main equipment used for the automated sorting of large express delivery.

Globally, the main manufacturers of Smart Sortation System include Daifuku, SSI SCHAEFER and KION Group (Dematic), etc. Among them, Daifuku and SSI SCHAEFER

both have the largest market share of over 7.0 percent. Europe is the largest market, holds a share over 25%.
