Smart Tourism Integrated Management Platform is a digital platform that integrates various technologies and data sources to provide comprehensive management and analysis of tourism activities. It aims to enhance the efficiency and effectiveness of tourism management by leveraging smart technologies such as artificial intelligence, big data analytics, Internet of Things (IoT), and cloud computing.

The platform collects and analyzes data from various sources, including tourist information, transportation systems, accommodation providers, attractions, and local businesses. It provides real-time information and insights to tourism authorities, businesses, and tourists, enabling them to make informed decisions and optimize their operations.

Some of the key features of a Smart Tourism Integrated Management Platform may include:

1. **Real-time data collection and analysis:** The platform collects data from various sources in real-time, such as tourist arrivals, traffic conditions, weather forecasts, and social media sentiment analysis. This data is then analyzed to provide insights and recommendations for tourism management.
2. **Destination management:** The platform helps tourism authorities in managing and

promoting destinations by providing tools for destination planning, marketing, and resource allocation. It enables authorities to monitor visitor flows, identify overcrowded areas, and implement crowd management strategies.

3. Personalized recommendations: The platform uses artificial intelligence algorithms to analyze tourist preferences and behavior patterns. It then provides personalized recommendations for attractions, activities, and services based on individual preferences and interests.

4. Smart transportation management: The platform integrates transportation data from various sources, such as public transport systems, ride-sharing services, and traffic monitoring systems. It provides real-time information on transportation options, routes, and schedules, helping tourists optimize their travel plans and reducing congestion.

5. Safety and security management: The platform incorporates safety and security features, such as emergency response systems, real-time monitoring of tourist areas, and alerts for potential risks or incidents. It helps authorities in ensuring the safety of tourists and managing emergency situations effectively.

In 2022, the gradual relaxation of epidemic prevention and control measures around the world will have a positive impact on the rapid recovery of the tourism industry.
