The global Smart TV Single Chip Solution market size is predicted to grow from US\$ 1859 million in 2025 to US\$ 2664 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

In 2025, global Smart TV Single Chip Solution production reached approximately 200 M units, with an average global market price of around 9,500 US\$/K units.

Smart TV Single Chip Solution refers to an integrated semiconductor platform used as the main processing chip inside smart televisions, combining core functions such as CPU processing, GPU graphics, video decoding, image enhancement, audio processing, display control, memory interface, connectivity support, security, and smart operating system compatibility into one highly integrated SoC. Compared with traditional multi-chip TV architectures, it reduces board complexity, power consumption, component count and system cost, while enabling 4K/8K video, HDR, AI picture quality enhancement, voice interaction, streaming applications and smart home connectivity.

Demand for Smart TV Single Chip Solutions is driven by the continuous upgrade of televisions from basic display devices to connected entertainment and smart home terminals. Although global TV shipment growth is relatively mature, chip value is rising as brands add higher resolution, faster refresh rates, AI image processing, better audio, low-latency gaming, voice control, regional broadcasting compatibility and stronger content security. Business opportunities are concentrated in 4K and 8K smart TVs, Mini LED and OLED TVs, gaming TVs, emerging-market Android TV platforms, operator-customized smart TVs and cost-effective all-in-one TV boards. Suppliers with strong integration capability, stable software ecosystems, multimedia IP, AI processing performance and long-term support for TV operating systems can capture higher design-

in value and deeper cooperation with TV brands and ODMs.
