Ultrasonic welding is the joining or reforming of thermoplastics or other materials through the use of heat generated from high-frequency mechanical motion. It is accomplished by converting high-frequency electrical energy into high-frequency mechanical motion. That mechanical motion, along with applied force, creates frictional heat at the plastic or other materials components' mating surfaces (joint area) so the material will melt and form a molecular bond between the parts.

Global ultrasonic welder key players include Branson (Emerson), Herrmann, Crest Group, Telsonic, etc. Global top 5 manufacturers hold a share over 40%.

China is the largest market, with a share about 55%, followed by Japan and Southeast Asia, both have a share about 25 percent.

In terms of product, plastic ultrasonic welder is the largest segment, with a share about 90%. And in terms of application, the largest application is automotive, followed by electronics and battery, packaging, medical, etc.
