The control valve is the terminal of the control system, and the Smart valve positioner plays a very important role in the control performance of the entire control valve and on-site performance. The Smart valve positioner can be used in the control process of the Smart valve positioner to achieve high-quality adjustment and increase the accuracy and stability of the process control. Smart valve positioners are digital valve controllers, microprocessor-based, current to pneumatic instruments with internal logic capability. They are designed to convert a current signal to a pressure signal to operate a valve while monitoring and recording data. They function very similarly to an analog-type positioner, except the electronic signal conversion is digital rather than analog.
