A smart video conferencing system is an integrated enterprise collaboration solution combining high-definition optics, audio arrays, and AI-driven software. Its core functions include automated speaker tracking, noise cancellation, real-time transcription, and seamless multi-party screen sharing. The primary application scenarios are corporate boardrooms, huddle rooms, educational institutions, and hybrid office environments. Its product boundary covers complete hardware-software integrated conference room terminals and all-in-one bars, excluding consumer-grade webcams or pure cloud-based SaaS meeting software without hardware integration.

Upstream industries provide optical sensors, high-performance digital signal processors, microphones, and display panels. The midstream involves hardware assembly, software development, AI algorithm integration, and overall system testing. Downstream channels include enterprise IT system integrators, value-added resellers, and corporate direct procurement.
