The global Smart Ward Solutions market size is predicted to grow from US\$ 3698 million in 2025 to US\$ 7564 million in 2032; it is expected to grow at a CAGR of 10.9% from 2026 to 2032.

The smart ward solution is a complete system solution based on the Internet of Things, artificial intelligence, big data and other technologies to provide digital and intelligent support for hospital inpatient management and patient care. It interconnects smart bedside terminals, vital signs monitoring equipment, nursing call systems, ward environment control and other equipment to achieve real-time collection of patient information, efficient collaboration between doctors and nurses, and visualization and refinement of ward management, thereby comprehensively improving the quality of medical services, patient experience and hospital operating efficiency.

The growth of the smart ward solution market is primarily driven by factors such as the digital transformation of hospitals, nursing staff shortages, the need for enhanced patient safety management, the widespread adoption of the Internet of Medical Things (IoMT), and the demand for refined hospital operations. As hospital wards transition from traditional manual care models to digital, connected, and intelligent management, the deployment of technologies including smart bedside terminals, nurse call systems, mobile nursing tools, automated vital sign monitoring, infusion monitoring, smart beds, electronic bedside displays, ward dashboards, and remote virtual nursing systems is steadily increasing. These solutions help hospitals improve nursing efficiency, reduce the burden of manual documentation and routine rounds, and mitigate risks such as falls, pressure ulcers, infusion irregularities, and patient identification errors. Concurrently, an aging population, a rising number of patients with chronic diseases, and the increasing complexity of inpatient care are fueling the demand for continuous

monitoring, intelligent alerting, collaboration among medical staff and patients, and closed-loop nursing management. Looking ahead, as technologies such as 5G, Wi-Fi 6, IoMT, AI-based early warning systems, wearable monitoring devices, and hospital information system integration mature, smart ward solutions will evolve from standalone bedside devices and nurse call systems into integrated digital ward platforms that encompass patient monitoring, nursing execution, risk alerts, bed management, patient services, and ward operations.
