Abstracts

According to this study, the global Smart Workspace Platform market size will reach US\$ 3191 million by 2031.

Smart Workspace Platform refers to upgrading the traditional work environment to a digital space management system with intelligent perception, automated control, data interconnection and collaborative management capabilities by integrating technologies such as the Internet of Things (IoT), artificial intelligence (AI), big data analysis, and cloud computing. Its core goal is to optimize the efficiency of workspace resource utilization, improve employee office experience, enhance collaboration efficiency, and provide data-based decision support for enterprises. It is suitable for various scenarios such as office buildings, factories, hospitals, and educational institutions.

Intelligent schedule management based on NLP, resource optimization algorithms based on machine learning, and spatial dynamic perception systems combined with the Internet of Things have become the mainstream technical directions. Leading manufacturers such as Microsoft Teams, ZOOMRooms, and China Enterprise WeChat and DingTalk Yida Platform have achieved an AI function module penetration rate of over 65%. The practice of digital twin technology in space management is gradually increasing. By building a virtual model of the workspace, it can simulate resource scheduling solutions in different scenarios, such as emergency evacuation route planning. Low-code development platforms are changing the industry ecology, enabling small and medium-sized enterprises to build customized systems at 1/3 of the cost of traditional solutions. The annual growth rate of this market segment is 28.4%. The proportion of distributed offices of global enterprises has risen from 38% in 2020 to 53% in 2023, giving rise to rigid demands for real-time collaboration, multi-terminal synchronization, and cross-time zone management. The intelligent workspace platform

can meet the needs of enterprises in a hybrid office mode, optimize resource allocation, and improve team efficiency.
