Power inductors in smartphones play a crucial role in managing the flow of electric current within the device. These inductors are important components of the power management circuitry, which controls the distribution of power to various subsystems, such as the processor, memory, display, and wireless communication modules. Power inductors help regulate current, store energy, and filter out noise in order to ensure the stable and efficient operation of the smartphone's electronic components.

Smartphone is a key driver of this industry. According to IDC, global smartphone shipments in 2022 reached 1.21 billion units, down 11.3% year on year, and the combined market share of the top five companies by shipment was 69.9%. Samsung, Apple, Xiaomi, OPPO and vivo ranked the top five in terms of market share, shipping 260.9 million units (21.6%), 226.4 million units (18.8%), 153.1 million units (12.7%), 103.3 million units (8.6%) and 99 million units (8.2%), respectively. In 2022, the top 10 countries for global smartphone sales will include China, India, the United States, Brazil, Indonesia, Russia, Japan, Germany, Mexico and the United Kingdom. Asia-pacific is the world's largest consumer region, accounting for 51% of global shipments, followed by North America (11%), Europe (16%), Latin America (11%) and the Middle East and Africa (11%). In terms of production, more than 90% of the world's smartphone production comes to China. Other major production areas include India, Vietnam and so on.
