The global SMAS Ultrasound Beauty Instrument market size is predicted to grow from US\$ 186 million in 2025 to US\$ 344 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

In 2025, global SMAS ultrasound devices production reached approximately 85,000 units. An SMAS ultrasound device is a non-invasive aesthetic equipment that utilizes High-Intensity Focused Ultrasound (HIFU) technology to target the SMAS layer (Superficial Musculoaponeurotic System), mainly used for facial lifting, skin tightening, anti-aging treatments, and contour sculpting. The device precisely focuses ultrasound energy on the deep skin layers and the SMAS fascia layer, stimulating collagen regeneration and tissue contraction to improve skin laxity, wrinkles, and sagging facial contours. Featuring non-surgical treatment, short recovery time, minimal trauma, and high treatment comfort, SMAS ultrasound devices are widely used in medical aesthetic institutions, skin management centers, and high-end beauty care applications. As consumer demand for non-surgical anti-aging treatments continues to grow, modern SMAS ultrasound devices are evolving toward multi-depth treatment capability, multiple probe configurations, intelligent energy control, real-time imaging, and personalized treatment solutions to enhance treatment precision, safety, and effectiveness.

The SMAS ultrasound device market has experienced steady growth in recent years, driven by increasing demand for non-surgical anti-aging treatments, the growing popularity of light medical aesthetics, and rising consumer attention to facial lifting and skin tightening care. As an ultrasound-based aesthetic device targeting the SMAS fascia layer, it is widely used in medical aesthetic institutions, skin management centers, high-end beauty salons, and anti-aging treatment applications for facial lifting, contour sculpting, skin tightening, and wrinkle reduction. With consumers placing greater

emphasis on safety, precision, comfort, and natural-looking results, demand continues to increase for features such as multi-depth treatment probes, intelligent energy control, real-time imaging, personalized parameter settings, and stable energy output systems. Meanwhile, aesthetic service providers are enhancing their anti-aging treatment competitiveness and customer retention, driving SMAS ultrasound devices toward greater intelligence, multifunctionality, higher precision, and improved safety. In the future, the market is expected to maintain strong growth potential, while competition will increasingly focus on treatment effectiveness, energy control accuracy, device safety, operational experience, clinical adaptability, and after-sales service capabilities.
