Sheet Molding Compound (SMC) is a high-performance composite material used in rail transit for manufacturing electrical enclosures, structural components, and interior parts. Composed of reinforcing fibers, resin, and fillers, SMC offers excellent electrical insulation, heat resistance, impact strength, and good moldability. The application of SMC enhances the safety, reliability, and durability of rail transit equipment.

In 2024, global SMC for Rail Transit production reached approximately 187 k tons, with an average global market price of around US$1700 per ton. This product typically has a single-line production capacity of approximately 5,000-12,000 tons per year, with an industry gross profit margin of approximately 15%-30%. Raw materials account for the largest portion of its cost structure (75-85%). The upstream components of this product include unsaturated polyester resin, vinyl ester resin, glass fiber, fillers (such as aluminum hydroxide and calcium carbonate), and various additives. Its downstream applications include rail transit equipment manufacturing, including cable trays, transformer boxes, interior panels (roofs and sidewalls), window frames, bathroom fixtures, and insulation supports.
