The global SMD Disk Varistor market size is predicted to grow from US$ 538 million in 2025 to US$ 737 million in 2031; it is expected to grow at a CAGR of 5.4% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

SMD disk varistors are surface-mount, nonlinear voltage-dependent resistive components primarily used for transient overvoltage suppression and surge protection in electronic circuits. Constructed from zinc oxide ceramics, they exhibit high resistance at normal voltages and rapidly switch to low resistance during voltage spikes. Compared to leaded types, disk varistors in SMD format offer smaller size, compatibility with automated mounting, and better parasitic performance control in high-frequency circuits. They are widely used in mobile devices, telecommunication modules, automotive electronics, and power systems due to fast response, high surge endurance, and long life.

United States market for SMD Disk Varistor is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for SMD Disk Varistor is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
