Abstracts

The global SMD Supercapacitor market size is predicted to grow from US\$ 1171 million in 2025 to US\$ 2022 million in 2032; it is expected to grow at a CAGR of 8.7% from 2026 to 2032.

In 2025, the global production of SMD Supercapacitors reached 420 million units, with an average selling price of USD 2.85 per unit. SMD Supercapacitors are supercapacitors packaged in surface-mount device (SMD) form, primarily based on Electric Double Layer Capacitor (EDLC) or Lithium-Ion Capacitor (LIC) technologies. They provide high power density, rapid charge/discharge capability, and exceptionally long cycle life. Compared with conventional leaded supercapacitors, SMD supercapacitors offer smaller size, compatibility with automated SMT assembly, lower parasitic characteristics, and higher manufacturing efficiency, making them well suited for compact and highly integrated electronic products. These devices are widely used in smart meters, Internet of Things (IoT) devices, wearable electronics, industrial control systems, automotive electronics, real-time clock (RTC) backup power, data backup, wireless communication modules, and consumer electronics, serving as key components for short-term energy storage and backup power applications.

The global SMD Supercapacitor market is experiencing solid growth, driven by expanding applications in the Internet of Things (IoT), smart metering, automotive electronics, industrial automation, and consumer electronics. As electronic devices continue to evolve toward miniaturization, lower power consumption, and higher reliability, demand for SMD supercapacitors capable of delivering instant power and long cycle life is increasing steadily. Meanwhile, continuous improvements in electrode materials, electrolyte formulations, and packaging technologies are enhancing energy density, high-temperature performance, and overall reliability. Looking ahead, SMD supercapacitors are expected to evolve toward higher energy density, smaller package sizes, lower internal resistance, wider operating temperature ranges, and longer service

life, creating strong growth opportunities in smart devices, industrial IoT, medical electronics, automotive electronics, and edge computing systems.
