Surface Mount Device (SMD) thick film resistors are electronic components used in circuitry to control the flow of electric current. These resistors are made using a thick film deposition process, where a resistive paste is printed onto a ceramic substrate and then baked to form the resistive element. SMD thick film resistors are designed for surface mounting onto printed circuit boards (PCBs), offering advantages like space efficiency, ease of automated assembly, and good stability under various operating conditions. They come in various sizes and power ratings, catering to different application needs. The 'thick film' aspect refers to the thicker layer of resistive material compared to thin film resistors, providing different electrical and thermal properties.

The global SMD Thick Film Resistors market size is projected to grow from US\$ 1726 million in 2024 to US\$ 2529 million in 2030; it is expected to grow at a CAGR of 6.6% from 2024 to 2030.
