The global SMD Unshielded Power Inductor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

SMD unshielded power inductors are surface mounted unshielded power inductors that are widely used in power supply circuits for electronic devices. Compared with closed power inductors, open inductors do not have an additional shielding layer and therefore may have lower cost and simpler construction. They are suitable for SMT processing and can be reflow soldered for automated production. Depending on the specific model, they can support different ranges of currents and have low DC resistance (DCR), helping to reduce power losses and improve power supply efficiency.

United States market for SMD Unshielded Power Inductor is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for SMD Unshielded Power Inductor is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
