A zener diode is used for regulating voltage in practical circuit applications. This semiconductor device permits the flow of current in a unidirectional way. Provided with sufficient voltage, they allow the flow of current in the opposite direction as well. The excess voltage required for reversing the direction of flow of current is termed as breakdown voltage or Zener voltage. The major role of a Zener Diode is to function as a voltage regulator. It is fairly employed in many electrical and electronic tools and equipments. The Zener Diode varies in a wider range based on its mounting location. Most of them are either mounted onto a surface or found in holed components. The surface mount Zener Diodes are directly mounted on a printed circuit board. This report focus on the SMD Zener diode.

Global SMD Zener Diode key players include On semiconductor, NXP, Rohm, Diodes Incorporated, Bourns, etc. Global top five players hold a share about 50%.

North America is the largest market, with a share about 30%, followed by Japan and Europe, having a total share about 40 percent.

In terms of product, the segment includes Single, Dual, Triple/Triple Opposing. And in terms of application, the largest application is Consumer electronic, followed by Automotive electronics, Industrial, Computer, Telecommunications.
