The global SMT Current Sensing Transformer market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The SMT current sensing transformer is a sensor device used to measure electric current, manufactured and mounted through surface mount technology. SMT current sensing transformers are mainly used to measure current changes in circuits and convert them into measurable or monitorable signals. It generates a magnetic field by passing the current of the circuit under test through a wire wound around the magnetic core, and then converts the magnetic field into a voltage output through the induction principle, thereby achieving current detection.

SMT current sensing transformers have the characteristics of miniaturization, high precision, easy installation, and wide application range, and are widely used.
