Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the SMT Red Glue market.

Patch adhesive, also known as SMT adhesive, SMT red plastic, usually red (also yellow or white) paste is evenly distributed with a hardener, pigment, solvent, etc., mainly used to The device is attached to a printed board and is typically dispensed by dispensing or stencil printing. After the components are attached, they are placed in an oven or reflow oven for heat hardening. It differs from solder paste in that it cures when heated, and its freezing point temperature is 150 ° C. It does not dissolve even when heated, that is, the thermal hardening process of the patch adhesive is irreversible. The use effect of SMT patch adhesive may vary depending on the heat curing conditions, the connected object, the equipment used, and the operating environment. When using, select the patch adhesive according to the printed circuit board assembly (PCBA, PCA) process.
