The global Snake Spring Coupling market size is predicted to grow from US\$ 225 million in 2025 to US\$ 289 million in 2031; it is expected to grow at a CAGR of 4.3% from 2025 to 2031.

The main structure of the serpentine spring coupling is composed of two half couplings, two half outer covers, two sealing rings and serpentine spring sheets. It transfers torque by embedding the serpentine spring into the tooth slots of the two coupling halves, and the coupling uses serpentine springs to be embedded in the tooth slots of the two coupling halves to realize the link between the driving shaft and the driven shaft.

Serpentine spring coupling is a kind of metal elastic coupling with advanced structure, which uses serpentine spring plate to transmit torque. The design of the serpentine spring coupling allows the serpentine spring to occupy a certain proportion of the coupling, which can better absorb and slow down vibration and prolong the service life of the coupling. The spring leaf has undergone special heat treatment and processing, which has good mechanical properties and further increases the service life. The design of the serpentine spring coupling allows it to withstand large load fluctuations. The spring leaf will deform along the arc of the tooth surface during the process of torque transmission, so as to provide a cushioning effect during start-up and impact load, and protect the safety of the coupling and supporting parts. The transmission efficiency of the serpentine spring coupling is very high, and it also has a short-term overload capacity of twice the rated torque, which makes it more reliable in operation. The design of the serpentine spring coupling results in less friction and wear, resulting in lower noise levels. In addition, unlike some other couplings that require frequent lubrication,

serpentine spring couplings are also relatively well lubricated. The structure of the serpentine spring coupling is relatively simple, which makes its assembly and disassembly process more convenient. In addition, it also has a certain tolerance of installation misalignment, which is suitable for some cases of incomplete alignment.
