A snorkel mask is a piece of equipment used for underwater activities such as snorkeling, free diving, or recreational diving. It consists of a single-piece mask with a tempered glass or plastic lens that covers the eyes and nose, allowing the wearer to see underwater while breathing through a snorkel tube attached to the mask. The mask creates an air space in front of the eyes, preventing water from entering and providing clear vision underwater. Modern snorkeling masks often feature a comfortable silicone skirt that seals against the face, adjustable straps for a secure fit, and a purge valve to clear water from the mask if it enters accidentally. Snorkeling masks are designed to enhance comfort, visibility, and safety for individuals exploring underwater environments for leisure or sport.

The global Snorkel Mask market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
