The global So-gel Method Amorphous Silica-Alumina (ASA) market size is predicted to grow from US\$ 63.44 million in 2025 to US\$ 98 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

Amorphous silica-alumina is a synthetic substance that is used as a catalyst or catalyst support. It can be prepared in a number of ways for example: Precipitation of hydrous alumina onto amorphous silica hydrogel. Reacting a silica sol with an alumina sol. Coprecipitation from sodium silicate / aluminium salt solution, etc. Amorphous silica-aluminas can be prepared by the sol-gel method using organic templates such as carboxylic acid and the gel skeletal reinforcement method.

Catalysis plays a very important role in the oil refining and petrochemical industry for the upgrading of hydrocarbons streams to modern transportation fuels. Amorphous silica-alumina (ASA) is widely used as a solid acid catalyst in various chemical reactions including hydrocracking, isomerization, and alkylation, which are important in the oil refining and petrochemical industry.

Amorphous Silica-alumina is a high technical barrier market with limited suppliers. Market concentration is high. The top 3 players are Sasol, W.R. Grace, Albemarle and Sasol.

Globally, production of Amorphous Silica-alumina is concentrated in USA, Europe, etc. while consumption of Amorphous Silica-alumina is widely spread in global market. The market in emerging countries, like China, Southeast Asia and Middle East is projected to be new growing point, while market in Europe is more modest in terms of stable light oil demand in European countries.

The sol-gel method is an important material preparation method with the advantages of simple process, high material purity and controllable performance. This method also shows broad application prospects in the preparation of amorphous silica-alumina composite materials. With the advancement of science and technology and the development of industry, the demand for amorphous silica-alumina composite materials in the fields of catalysts, refractory materials, electronic packaging, etc. has continued to grow, which has promoted the continuous research and development and market expansion of sol-gel preparation technology.
