A soaking tank is a device designed for the immersion of objects in a liquid for purposes such as cleaning, treatment, or inspection. These tanks come in two primary types: manual, ideal for small-scale operations, and automatic, designed for larger-scale or repetitive processes.

Common uses include not just cleaning and treating materials but also conducting inspections in a fluid environment. A soaking tank system typically comprises a durable tank made from materials like steel or aluminum, a pump to circulate the liquid, and a control device to manage the operation efficiently.

Its essential features include the capacity for thorough immersion, adaptability for various processes, and configurations designed to meet the demands of both small and large-scale tasks. This makes soaking tanks an invaluable tool in many industrial and manufacturing settings.
