The global SoC Chip Customization Services market size is predicted to grow from US\$ 9529 million in 2025 to US\$ 20526 million in 2032; it is expected to grow at a CAGR of 11.6% from 2026 to 2032.

SoC Chip Customization Services refer to a full-chain professional technical service that provides tailored system-on-chip solutions for downstream customers, covering the whole process from chip demand analysis, architecture definition, IP integration, functional verification, physical design and tape-out support to packaging, testing and mass-production guidance. Instead of supplying standardized off-the-shelf chips, these services customize integrated circuits with dedicated functions, performance parameters and power consumption indicators to match specific application scenarios and terminal products, helping customers achieve differentiated competition, system integration optimization and overall cost control.

The demand for SoC Chip Customization Services is driven by the rapid development of emerging industries including intelligent vehicles, edge artificial intelligence, the Internet of Things and industrial control, as well as the continuous pursuit of product differentiation and proprietary intellectual property rights by terminal enterprises. Business opportunities lie in the development of high-reliability customization services for automotive-grade and industrial-grade chips, the innovation of Chiplet-based advanced packaging customization solutions, the expansion of low-power and high-performance IP integration services for edge computing scenarios, and the growth of localized replacement demand for core chips in key fields, together with the incremental demand brought by small and medium-sized customers lacking independent chip research and development capabilities.
