The global SoC PMIC market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

System-on-chip PMIC (Power Management IC), also known as power management IC, is a special-purpose integrated circuit that plays a role in power management in the circuit system. Its main functions include power management, charging control, switch control circuit, DC-DC Converters, low dropout regulators (LDO), battery chargers, power supply selection, dynamic voltage regulation, each power supply on and off sequence control, each power supply voltage detection, temperature detection, etc.

With the development of electronic equipment, PMIC requires higher integration to achieve more efficient and smaller power supply design. Multifunctional power management IC (PMIC) is a highly integrated device that integrates multiple power management functions and can achieve more efficient power management.
