Abstracts

The global Sock Aids market size is predicted to grow from US$ 91.66 million in 2025 to US$ 148 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

In 2024, the global production of sock aids was estimated at 8-15 million units, with an average selling price of approximately $2-15 per unit and a gross profit margin of about 50%. Single-line production capacity was estimated at 500,000-2 million units per year. A sock-wearing aid is a rehabilitation and daily living assistance device based on the principles of incline and traction. It uses a temporary "prosthetic foot" structure to pre-stretch the sock and uses straps to transfer it to the user's actual foot, thus physically compensating for the user's limited ability to bend over and perform fine motor skills. It is a classic tool in rehabilitation medicine and adaptive design. The upstream of the sock-wearing aid industry consists of raw material suppliers such as plastic particles, resins, metal sheets, and textile tapes; the midstream consists of rehabilitation equipment manufacturers who transform raw materials into finished products through processes such as injection molding and assembly, with the core being ergonomic product design and large-scale production capabilities; the downstream reaches end consumers through channels such as medical device stores, online e-commerce platforms, and elderly care service institutions. The demand primarily stems from a large group of people with limited physical flexibility, including those who have difficulty bending over due to pregnancy, obesity, old age, or lumbar/joint surgery. The core driving force is to provide them with safe and independent dressing solutions to avoid the risk of falls, reduce pain, and maintain personal dignity. It is a key product in the rehabilitation assistive device market.

Report Scope

LP Information, Inc. (LPI) ' newest research report, the “Sock Aids Industry Forecast” looks at past sales and reviews total world Sock Aids sales in 2025, providing a comprehensive analysis by region and market sector of projected Sock Aids sales for 2026 through 2032. With Sock Aids sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US$ millions of the world Sock Aids industry.

This Insight Report provides a comprehensive analysis of the global Sock Aids landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyzes the strategies of leading global companies with a focus on Sock Aids portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms’ unique position in an accelerating global Sock Aids market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Sock Aids and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Sock Aids.

This report presents a comprehensive overview, market shares, and growth opportunities of Sock Aids market by product type, application, key manufacturers and key regions and countries.
