Residual Current Devices help protect people and equipment against electrical shocks caused by indirect contact. RCDs work together with Miniature Circuit Breakers (MCB) or fuses, covering the whole system against potentially damaging thermal and dynamic stresses of any overcurrent. This unit replaces a standard socket outlet. It provides protection to anyone that comes into contact with the equipment plugged into the socket outlet and its leads. These are great for both fire and electrocution protection when using appliances.

The global Socket-Outlet Residual Current Devices market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
