Socket welding pipe fittings are high-pressure pipe connectors that are connected by welding after the pipe is inserted into the pipe fitting socket. They are often used in fluid transportation systems with small nominal diameters (generally below DN50) and high requirements for sealing and strength. Its common types include socket elbows, socket tees, socket joints, socket reducers, etc. They are usually made of forged steel materials and have the advantages of easy installation, compact structure, hidden welds, and strong anti-leakage ability. They are widely used in medium and high pressure small-diameter pipeline systems in industries such as petrochemicals, electric power, shipbuilding, pharmaceuticals, and environmental protection.

United States market for Socket Welding Pipe Fittings is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
