Sodium-2-Propine-1-Sulphonate is a compound with a unique structure and chemical properties, which contains both propargyl and sulfonate groups. 1. In bright nickel plating, sodium propargyl sulfonate (PS) is an auxiliary moving agent that can improve the brightness and filling properties of low areas, with obvious effects and low brittleness of the coating; 2. Usually used in combination with secondary brighteners such as saccharin and alkynes. 3. Electroplating brightener, which can improve the brightness of the current density area, enhance the walking force, leveling ability, and impurity tolerance; The intermediate product of PS production, acetylene chloride, adopts advanced production technology and does not contain oily substances. The purity of acetylene chloride reaches over 99%.
