Sodium 3-mercaptopropane sulfonate (MPS) is a chemical raw material that appears as a white to slightly yellow powder, easily soluble in water, and the aqueous solution is transparent and clear. Sodium 3-mercaptopropane sulfonate (MPS) is mainly used as a copper plating additive in processes such as copper plating on printed circuit boards, acidic copper plating, and electrolytic copper plating. In addition, as a pharmaceutical intermediate, sodium 3-mercaptopropane sulfonate (MPS) has many applications in drug delivery, radiation therapy, scientific research, and other fields. Copper plating additives are key materials for copper foil production and performance control. According to their different effects, copper plating additives can be divided into three categories: wetting agents, leveling agents, and brighteners. Sodium 3-mercaptopropane sulfonate (MPS) and sodium polydithiopropionate sulfonate (SPS) are currently the most widely used brightener based copper plating additives, with similar effects and slightly different mechanisms of action.
