Sodium hexametaphosphate for food application is a hexamer of composition $(\text{NaPO}_3)_6$. It is a water-soluble polyphosphate glass that consists of a distribution of polyphosphate chain lengths. Its high degree of solubility sets it apart from other sodium phosphates. Sodium hexametaphosphate typically is differentiated by four characteristics: grade, chain length designation, P_2O_5 content, and particle size.

Sodium hexametaphosphate production mainly concentrates in China and Xingfa Group is the largest producer globally. Each year, China exports about 50000 tons sodium hexametaphosphate to the world. USA is a net importer of sodium hexametaphosphate. Since USA government imposes antidumping taxes on Chinese exporters, Thailand and Europe are the major import sources of USA sodium hexametaphosphate.

As the global consumption of processed foods rises, sodium hexametaphosphate for food application's role as a food preservative and emulsifier becomes increasingly important. Sodium hexametaphosphate for food application can be used such fields:

Dairy Industry Growth: Sodium hexametaphosphate is widely used in dairy products to improve texture and stability, benefiting from the growing demand for cheese and

yogurt.

Beverage Applications: Its use in beverages, particularly in soft drinks and juices for stabilization and shelf-life extension, offers significant market potential.

Meat and Seafood Processing: Sodium hexametaphosphate is used in marinating solutions and to enhance moisture retention in meat and seafood products, aligning with trends toward higher quality protein products.

The increasing demand in these sectors can drive market growth of sodium hexametaphosphate for food application.
