The global Sodium Methylcyclopentadienoate market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Sodium methylcyclopentadienoate is a strong base that reacts with acids to form salts and organic compounds. It is often used as a strong reducing agent to reduce compounds such as ketones, aldehydes, and esters. Sodium methylcyclopentadienoate can also be used as a catalyst to catalyze a variety of organic reactions, such as reduction, carbonylation, and cycloaddition. Methylcyclopentadiene (an organic intermetallic compound) is obtained mainly by high-temperature cracking of cyclopentene, and then reacts with sodium hydroxide to form sodium methylcyclopentadienoate.

With the continuous improvement of production technology and the expansion of production capacity, the supply capacity of sodium methylcyclopentadienoate has been significantly improved. At the same time, competition among enterprises in the industry has also promoted the improvement of production efficiency and product quality. As an important chemical raw material, sodium methylcyclopentadienoate is widely used in many fields such as medicine, pesticides, rubber, plastics, etc. With the continuous growth of demand in these fields, the market demand for sodium methylcyclopentadienoate has also shown a steady upward trend.
