The global Sodium Naphthalenesulfonate Formaldehyde Condensate market size is predicted to grow from US\$ 572 million in 2025 to US\$ 707 million in 2032; it is expected to grow at a CAGR of 3.1% from 2026 to 2032.

Sodium Naphthalenesulfonate Formaldehyde Condensate (abbreviated as SNF or PNS) is a water-soluble Sodium Naphthalene Sulfonate Formaldehyde Condensate (abbreviated as SNF or PNS) is a water-soluble organic polymer compound ranging in color from light brown to dark brown. It is a polymeric salt produced by the sulfonation of naphthalene with concentrated sulfuric acid, followed by condensation with formaldehyde, and subsequent neutralization with caustic soda (sodium hydroxide).

The upstream supply chain primarily comprises industrial naphthalene, refined naphthalene, sulfuric acid (or fuming sulfuric acid), formaldehyde, liquid caustic soda, soda ash, sulfite-based auxiliaries, and process water. Among these inputs, naphthalene serves as the source of the aromatic backbone; sulfuric acid is utilized for sulfonation to generate naphthalene sulfonic acid; formaldehyde is employed for condensation to form the methylene-bridged structure; and liquid caustic soda or soda ash is used for neutralization to produce the sodium salt. Downstream, the product is primarily utilized as a dispersant and water-reducing agent in various sectors, including construction materials, dyes and pigments, agrochemical formulations, and coatings and inks.

In 2025, global sales volume is projected to reach approximately 900,000 tons, with an average price of approximately \$650 per ton; the gross profit margins for major enterprises in the industry are expected to range between 12% and 25%. organic polymer compound ranging in color from light brown to dark brown.
