Sodium Polystyrene Sulfonate, commonly known as SPSS or SPS, is a polymer used as a medication to treat high levels of potassium in the blood, a condition known as hyperkalemia.

The market for Sodium Polystyrene Sulfonate is driven by its essential medical applications in managing hyperkalemia. It works by exchanging sodium ions for potassium ions in the intestines, helping to lower blood potassium levels. The demand for effective and safe treatments for hyperkalemia may influence the preference for Sodium Polystyrene Sulfonate. The continuous growth in the healthcare and pharmaceutical industries and the need for advanced treatments for electrolyte imbalances may further influence market dynamics. However, the market may face challenges related to potential adverse effects and the need for careful patient monitoring during treatment.
