Sodium-reduced tantalum powder is a high-purity metallic powder produced through the thermal reduction of tantalum pentoxide (Ta_2O_5) using metallic sodium as a reducing agent. This process typically occurs at elevated temperatures under controlled conditions, yielding a porous, sponge-like powder with a dendritic particle structure and high surface area. Due to its excellent purity, controlled particle size distribution, and superior sintering properties, sodium-reduced tantalum powder is widely used in the manufacture of high-capacitance tantalum capacitors, aerospace and biomedical alloys, and advanced powder metallurgy applications. Its performance characteristics make it a critical material in the electronics and high-tech manufacturing industries.
