Abstracts

The global Sodium Selenite Raw Material market size is predicted to grow from US\$ 95.87 million in 2025 to US\$ 147 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

Sodium Selenite Raw Material refers to an inorganic selenium compound raw material primarily composed of sodium selenite (Na_2SeO_3 , CAS No. 10102-18-8), in which selenium is present in the +4 oxidation state. It is generally supplied as a white or off-white crystalline powder and is readily soluble in water. Due to its relatively high selenium content and good water solubility, sodium selenite is widely used as an inorganic selenium source in animal nutrition, food fortification, nutritional supplements, and pharmaceutical applications.

Depending on purity, impurity control, heavy-metal limits, and applicable quality standards, Sodium Selenite Raw Material can be classified into feed grade, food grade, pharmaceutical grade, and other high-purity or industrial grades. Feed-grade products are mainly used in premixes and trace-mineral additives; food-grade products are primarily used in nutritional fortification and dietary supplement applications; and pharmaceutical-grade products are used as raw materials for selenium-containing pharmaceutical preparations.

For the purposes of this market study, Sodium Selenite Raw Material mainly refers to bulk sodium selenite before further dilution, premixing, or formulation. It excludes low-concentration premixed feed additives, finished dietary supplements, finished pharmaceutical products, and small-pack laboratory reagents. From a global perspective, Sodium Selenite Raw Material prices are mainly influenced by selenium prices, product grade, purity, regulatory compliance, and purchasing volume. Bulk feed-

grade products are generally priced at around USD 8–15/kg, while food-grade products typically range from USD 10–30/kg. Pharmaceutical-grade material usually commands higher prices, often around USD 30–100/kg or above, due to stricter requirements for impurity control, heavy metals, documentation, and GMP compliance.

The upstream industry chain mainly includes selenium, selenium dioxide, sodium hydroxide or sodium carbonate, with selenium largely recovered as a by-product of copper refining and other non-ferrous metal processing. Midstream manufacturers carry out reaction, purification, crystallization, drying, and quality control. Downstream demand is concentrated in animal feed and premixes, food fortification, dietary supplements, and pharmaceutical formulations. Feed-grade products account for the majority of global consumption volume, while food- and pharmaceutical-grade products represent smaller but higher-value market segments.

United States market for Sodium Selenite Raw Material is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Sodium Selenite Raw Material is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Sodium Selenite Raw Material is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key Sodium Selenite Raw Material players cover RETORTE GmbH, biosyn Arzneimittel GmbH, Global Calcium Pvt. Ltd., VMaruti Chemical, Jyoti Agro Feeds Pvt. Ltd., etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
